BNDD: The Quadratic Deflation ETF

Q3 2026

About Quadratic Capital Management and Krane Funds Advisors, LLC

Quadratic Capital Management

Quadratic Capital Management is an innovative asset management firm founded in 2013 by Nancy Davis. The firm has utilized its significant expertise in fixed income and options markets to construct The Quadratic Deflation ETF (NYSE Ticker: BNDD). Quadratic Capital Management serves as the Investment Sub-Adviser to the BNDD ETF.

Krane Fund Advisors, LLC

Krane Funds was founded in 2013 by Jonathan Krane and manages approximately $9 billion. The firm seeks to provide innovative, first to market strategies that have been developed based on the firm and its partners' deep knowledge of investing. Krane Funds Advisors serves as the Investment Adviser to the BNDD ETF.

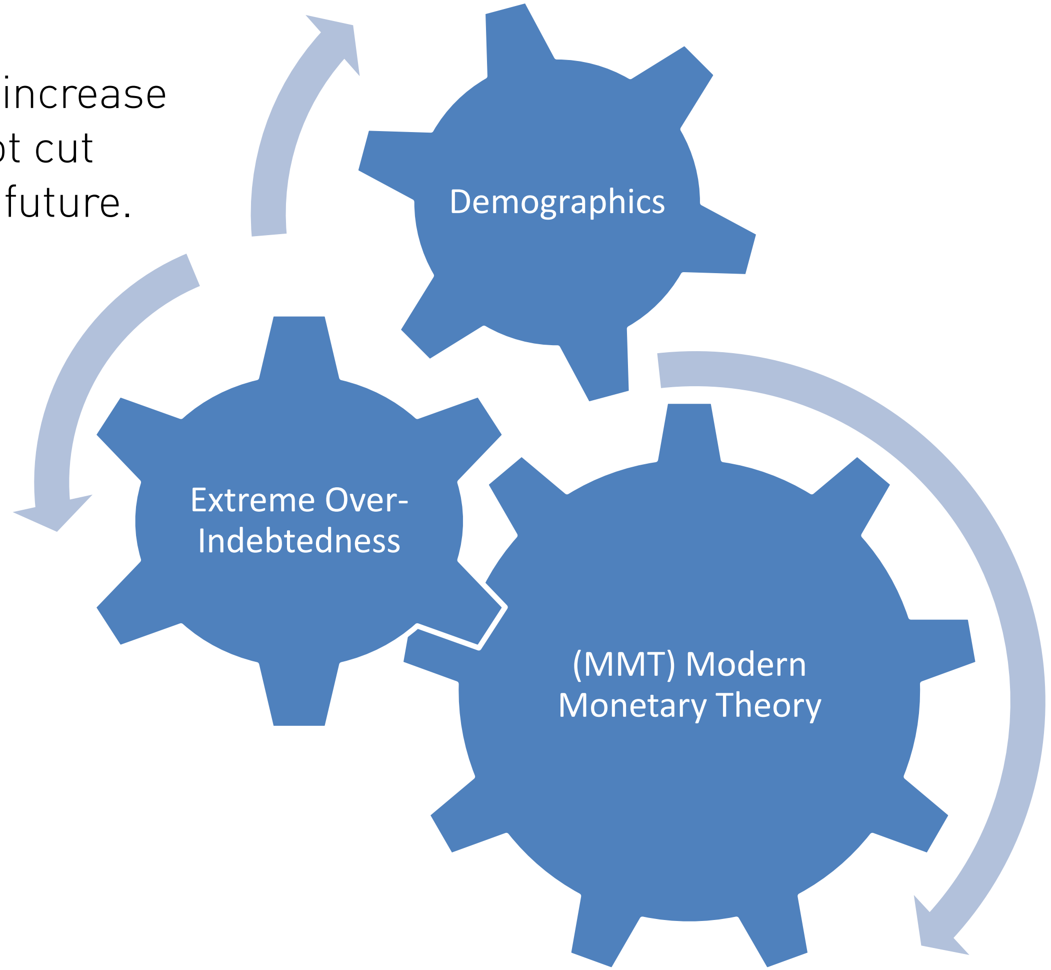
Wall Street Journal profiled 6 investors' market views and strategies

Problem: The Debt Machine is Challenging Investors

Extreme over-indebtedness has worsened dramatically, and the US fiscal situation is tenuous.

BNDD uses interest rate options to enhance long duration bonds to increase the exposure if long-term yields fall and to benefit if the Fed does not cut interest rates as much as the market has currently priced in for the future.

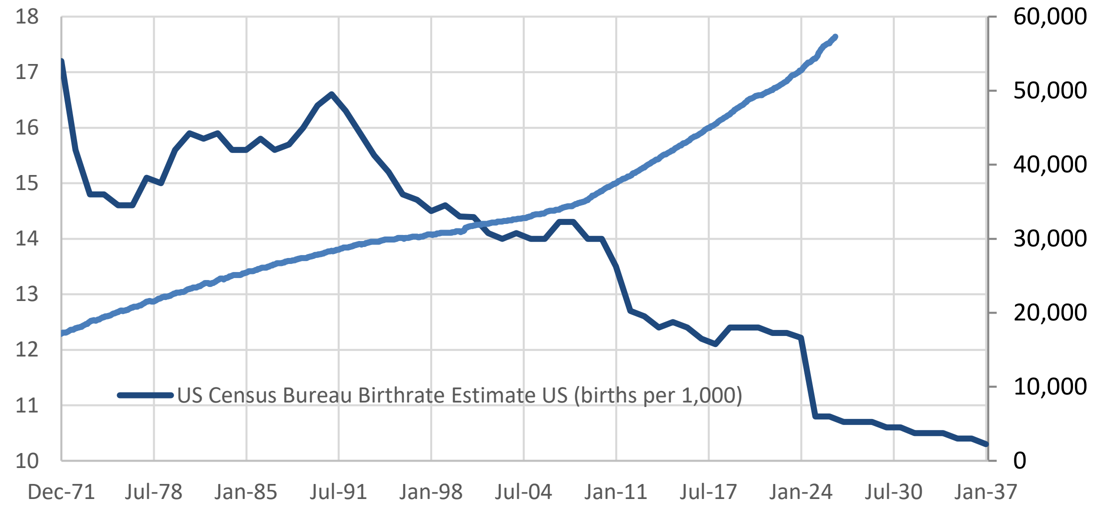
- Is it time to add duration to your portfolios given the move higher in long-term interest rates?
- Are fundamentals too weak to sustain current long-term yields?
- After a year of risk management cuts in 2025, will higher energy costs and a resilient labor market in 2026 sustain Fed hikes and stifle growth?
- Do demographics and high debt service costs breed more and more debt until we reach deflation?
- Is there no way out of this debt trap?



Demographics

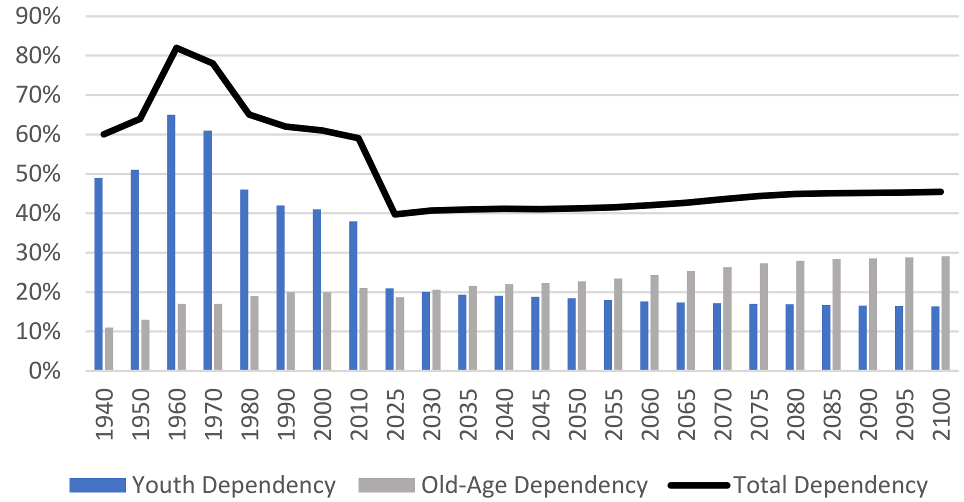
- The US population is aging, and the baby boomers are retiring.
- The birthrate in the US has been falling since the early '90s. The Census Bureau estimates that this decline will continue.
- An economy is strengthened by people having babies, consuming and working. When population growth stalls, the costs of government programs are spread over fewer people.
- The median age in the US has increased by roughly 50% since 1965.

US Census Bureau Birthrate Estimate vs. Social Security Benefits



Sources: 1- U.S. Census Bureau, Population Division
2 - Social Security Administration as of May 31, 2026

US Dependency Ratios
Historical from 1940 to 2010,
Projected Ratios from 2020 to 2100



Sources: U.S. Census Bureau, 1940-2012 Population Estimates, 2023 National Population Projections

Extreme Indebtedness

- While many believe stimulus spurs growth, it has ballooned the federal debt to well beyond 100% of GDP.
- These are debt levels never seen outside of wartime.

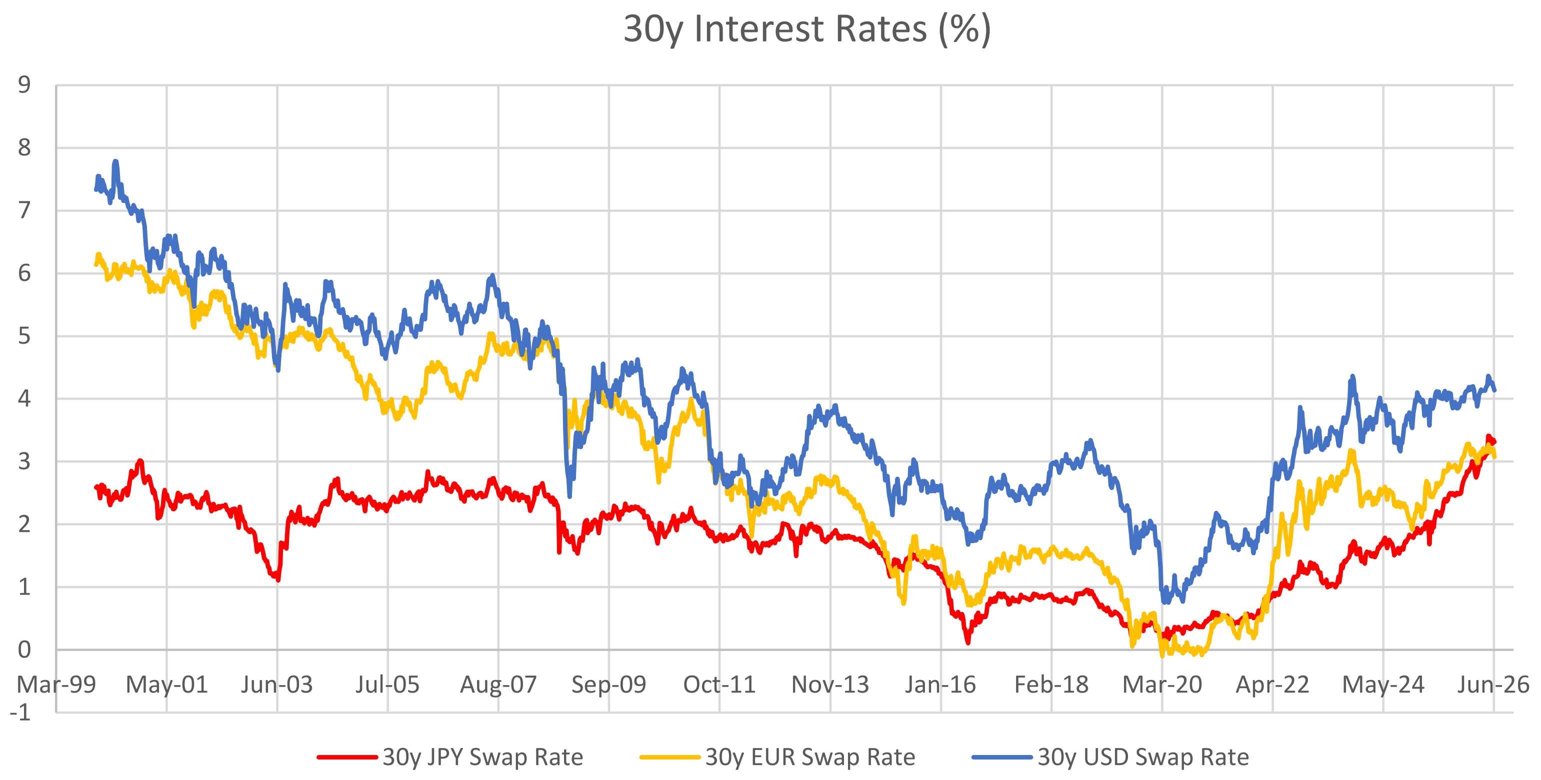
Lower for Longer: How different is the US from Europe and Japan?

- Global long-term interest rates have plummeted over the past three decades amid a surge in sovereign debt issuance.
- This may have created a perverse incentive for central banks to keep interest rates “lower for longer.”
- With the recent rise in global long-term rates, is it time to add US duration to your portfolio?



Source: Bloomberg and Quadratic Calculations as of June 2026

BNDD: Built to Help Investors Navigate the Debt Machine

- The Quadratic Deflation ETF (the "Fund") seeks to benefit from lower growth, deflation, lower or negative long-term interest rates, and/or a reduction in the spread between shorter and longer term interest rates by investing in U.S. Treasuries and options. It provides access to a part of the market usually reserved for large institutions
- It may potentially help hedge a portfolio against the effects of deflation and/or the compression of the yield curve.

Unique Access

- Provides access to OTC fixed income options market which is typically not available to investors directly.

Asymmetric Upside

- Has the potential for enhanced returns in periods of lower growth.
- Option downside is limited to the market value of the options.*

Portfolio Diversification

- A potential diversifier to a traditional 60/40 portfolio.
- Bonds have historically increased during large equity sell-offs.

* This statement applies to the options within the ETF. As with all ETF's, the ETF investor's downside risk is equal to their investment in the Fund.

QUADRATIC CAPITAL

Quadratic Capital – Our Approach to Investing

BNDD is managed by Quadratic Capital, an innovative, woman-owned asset manager with extensive expertise in options trading and portfolio management.

QUADRATIC

Quadratic was founded in 2013 by Nancy Davis

Extensive experience structuring portfolios with the use of options

Quadratic provides positive convexity to fixed income portfolios

PHILOSOPHY

Quadratic's ETF strategies complement other diversifying investments

Quadratic utilizes its significant expertise in the interest rate volatility and options markets to construct its portfolios

ACCESS

The Quadratic ETFs aim to democratize financial markets by providing access to the OTC Interest Rate Markets

Prior to Quadratic's ETFs, these strategies were not available to many investors

PROCESS

An investment process must be repeatable

Quadratic utilizes options in a way that seeks to mitigate the downside risk of the strategy while maintaining upside potential

PORTFOLIO

Portfolio is composed of long dated US Treasury bonds plus interest rate options

The interest rate options provide exposure to the spread between interest rates at different points in time

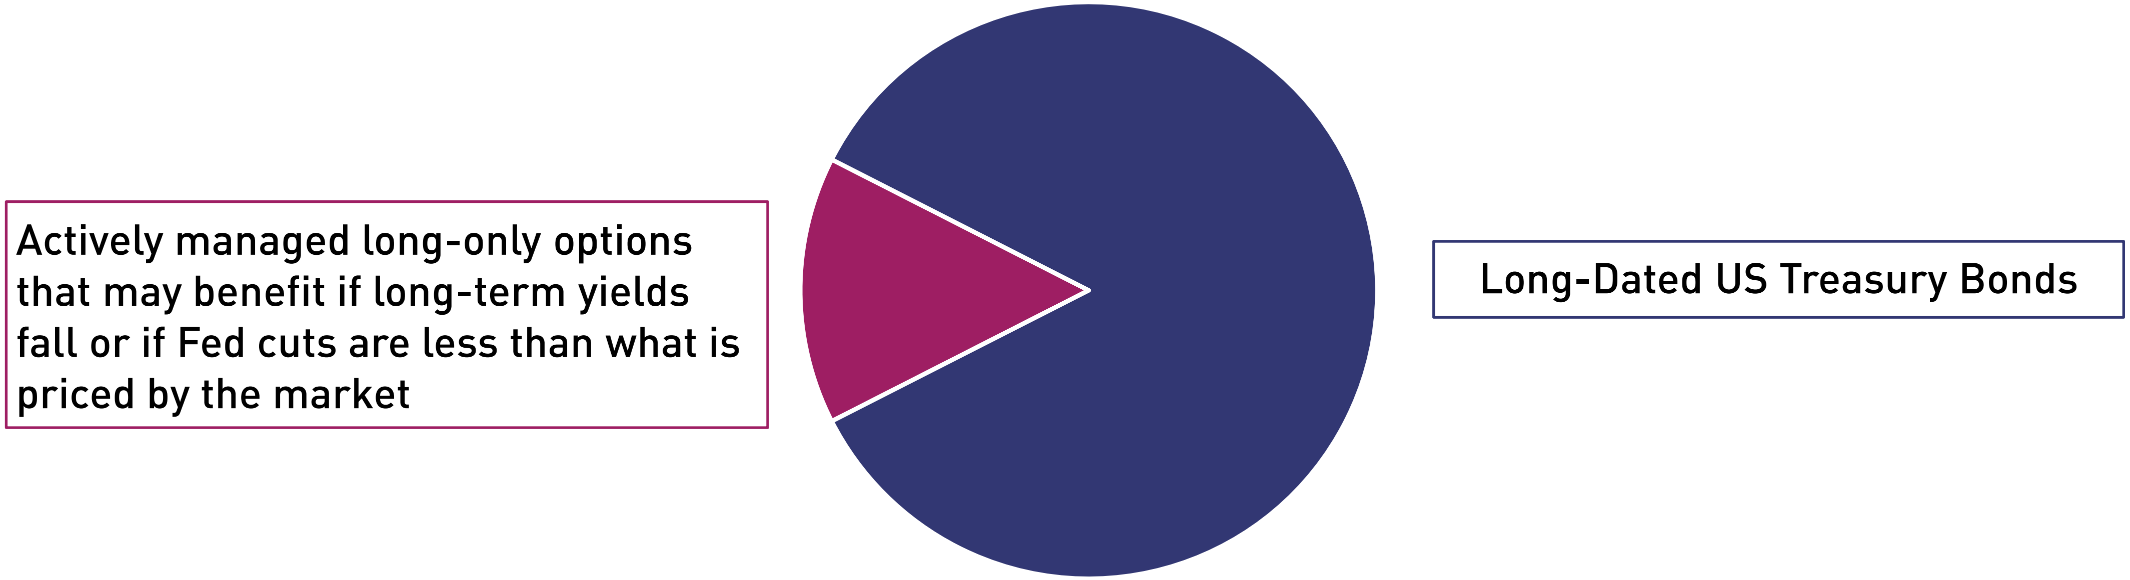
GOALS

As long dated interest rates decline, the bonds should appreciate in price

This strategy may serve as a bond enhancement strategy

BNDD Portfolio Composition

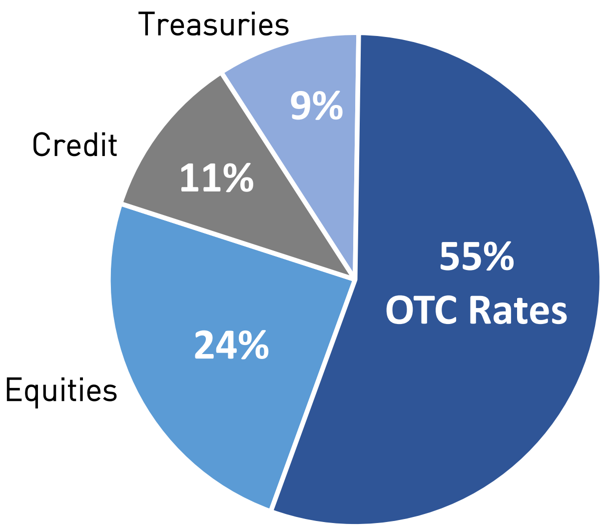
- The BNDD portfolio is composed primarily of long dated US Treasury bonds.
- In addition to bonds, the portfolio includes long-only options on the shape of the US interest rate curve.
- As interest rates decline, the bonds should appreciate in price.
- The options provide exposure to the spread between interest rates of different maturities.
- As the curve flattens because of lower inflation expectations and/or deflation, the price of the options tends to increase.



BNDD Provides Access to the Largest Asset Class: Rates

- BNDD provides access to the largest asset class: OTC rates.
- Most investors limit their exposure to stocks and bonds.
- The rates market is over 2 times larger than the US stock market.

Relative Sizes of US Financial Markets



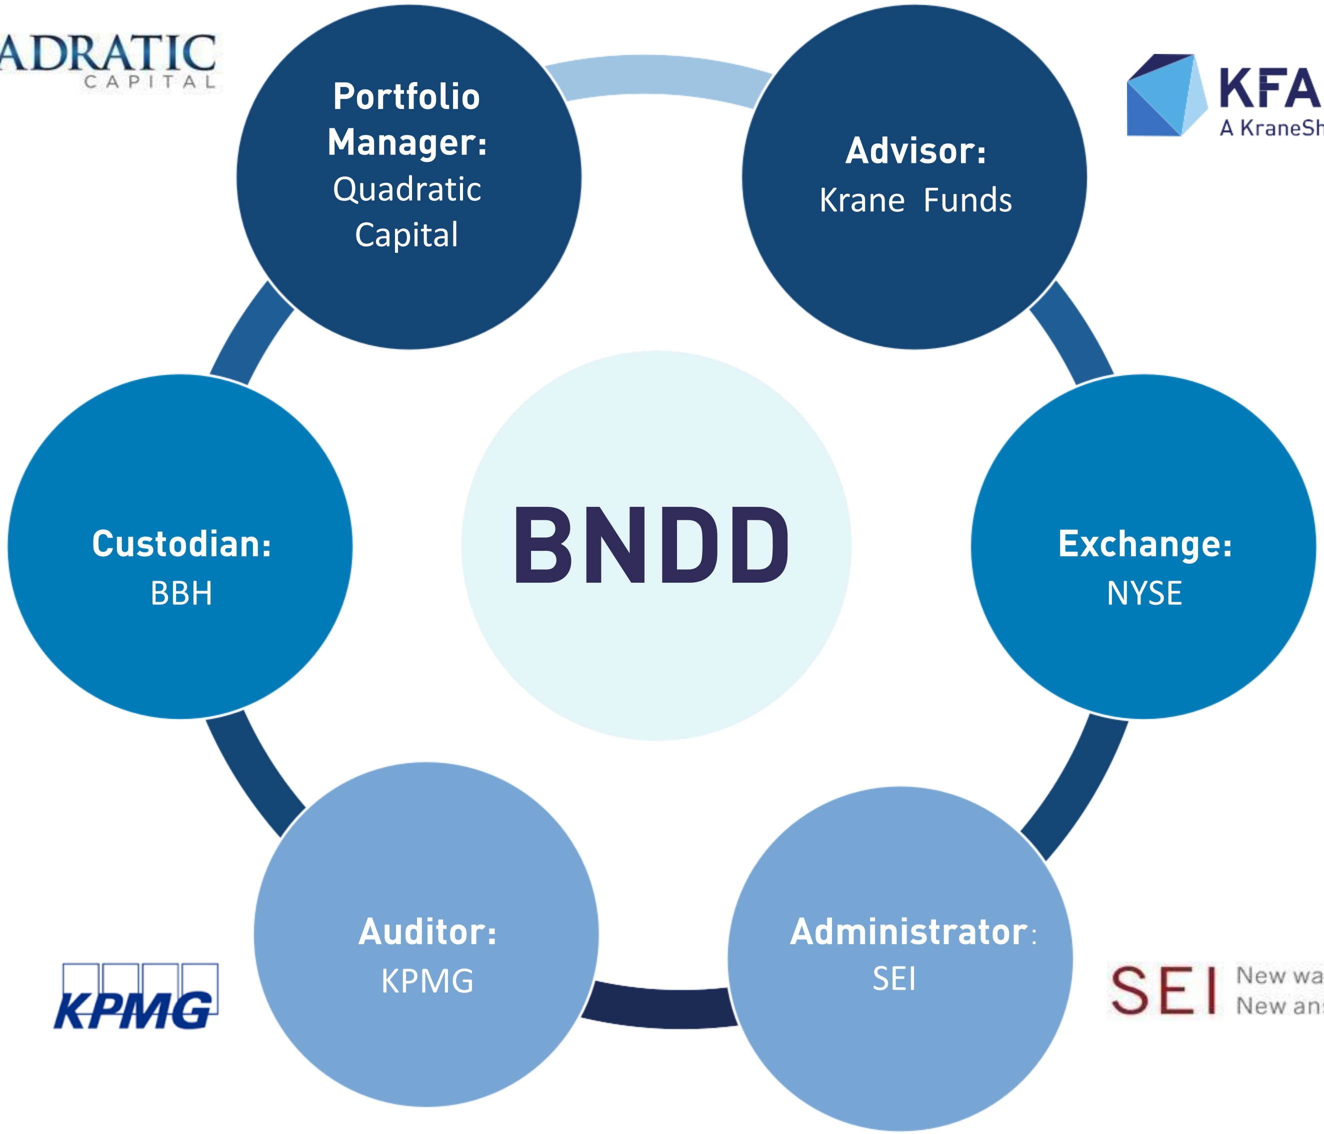
BNDD accesses the OTC Rates market

Potential Benefits:

- By incorporating options, BNDD may enhance a portfolio consisting only of bonds and/or stocks.
- BNDD is a fixed-income strategy designed to benefit from the decline in interest rates and the flattening or inverting of the yield curve.
- BNDD may act as a market hedge since bond prices have historically increased during large equity sell-offs.

Source: Nasdaq, SIFMA and BIS. "US OTC Rates" defined as the notional value outstanding in interest rate contracts denominated in USD as of H2 2025.

The BNDD Ecosystem



BNDD Risk Profile

Investing involves risk, including possible loss of principal. There can be no assurance that the Fund will achieve its stated objectives, including its objective of eliminating deflation risk. Investors should take note of the following risks before investing in BNDD. A more thorough discussion of options investing can be found on the Options Clearing Corporation's website. A link to which can be found in the Important Notes section of this presentation.

- A Steepening Yield Curve Risk: BNDD may underperform or lose money when the forward U.S. interest rate curve steepens, perhaps significantly. When this occurs the Fund's investments may generally underperform a portfolio consisting solely of U.S. government bonds.
- Leverage Risk: BNDD's OTC options may give rise to a form of leverage, which may magnify the Fund's potential for gain and the risk of loss. The Fund may potentially be more volatile than a portfolio of traditional investments such as stocks or bonds.
- Liquidity & Counterparty Risk: OTC options may be subject to liquidity risk and counterparty risk.
- Credit & Non-Curve Interest Rate Risk: BNDD's use OTC options is not intended to mitigate counterparty risk, or non-curve interest rate risk. Additionally, BNDD invests in debt securities, which typically decrease in value when interest rates rise.
- Considered Speculative: Investing in options tied to the shape of the forward swap curve is considered speculative and can be extremely volatile.
- Concentration Risk: The fund is non-diversified.

BNDD Performance History

	Cumulative %			Average Annualized %		
As of 6/30/26	3 Mo	6 Mo	Since Inception	1yr	3yr	Since Inception
Fund NAV	2.32%	5.90%	-17.73%	3.20%	-4.94%	-4.00%
Closing Price	4.18%	7.53%	-16.59%	4.77%	-4.49%	-3.73%
Index*	0.85%	0.44%	-28.52%	2.89%	-0.46%	-6.78%

BNDD shareholders have received minimum monthly distributions of 30 basis points each month for over 4 years. Some distributions include a partial return of capital.

As of 6/30/26, the 30-day SEC Yield is 2.66%. *30-day SEC yield is a standard yield calculation developed by the U.S. Securities and Exchange Commission (SEC) that allows for fairer comparisons of bond funds. It is based on the most recent 30-day period covered by the fund's filing with the SEC. It includes any TIPS principal adjustment from inflation as income. An exceptionally high 30-Day SEC yield may be attributable to a rise in the inflation rate, which might not be repeated.*

The performance data quoted above represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, please visit www.bnddetf.com inception on 9/20/21. Past performance is no guarantee of future results.

**Index is the Bloomberg Long U.S. Treasury Index. Please note that although this index is provided for comparative purposes, the fund's strategy is benchmark agnostic. Index returns are for illustrative purposes only. Index performance returns do not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index.*

Performance Comments:

Since inception, BNDD has outperformed long-dated US Treasuries in various environments:

Risk On:
- BNDD outperformed during the risk on period of Q4 2021 thru Q1 2022 as it was +9.64% while long-term Treasuries were -7.83% and the S&P500 was +5.17%. This outperformance can be attributable to 2y yields rising during a Fed hiking cycle, causing the 2s30s yield curve to flatten.

- BNDD outperformed in the first half of 2024. As the Fed delayed interest rate cuts, the rolldown of the yield curve benefited BNDD's interest rate option portfolio. BNDD was roughly flat in the first half of the year (-0.16%), while long-term Treasuries were -5.01%.

- BNDD underperformed in 2025 as the 2y30y yield curve steepened. Furthermore, falling implied volatility negatively affected BNDD's option portfolio.

Risk Off:
- In Q3 2022, as the market adjusted to restrictive monetary policy, BNDD outperformed long-term Treasuries. BNDD was -2.98% while long-term Treasuries were -9.63%. As reference, the S&P500 was -5.28% in Q3 2022.

- In Q1 2025, as equity markets declined led by the Tech sector (Nasdaq -10.42%), the rates market began pricing in more Fed rate cuts. That caused the 2y30y yield curve to steepen and BNDD to underperform (-0.29%) vs. long dated Treasury bonds (+4.67%).

- In the first half of 2026, higher energy prices due to the Iranian conflict repriced Fed expectations from cuts to hikes. BNDD NAV outperformed (+7.53%) long dated Treasury bonds (+0.44%) as the 2y30y yield curve flattened.

Portfolio Management and Capital Markets Leadership

Nancy Davis, Chief Investment Officer, Quadratic Capital Management

Nancy Davis founded Quadratic Capital in 2013. She is the portfolio manager for The Quadratic Interest Rate Volatility and Inflation Hedge ETF (Ticker: IVOL) and The Quadratic Deflation ETF (Ticker: BNDD). Prior to starting Quadratic, Nancy was with Goldman Sachs for about a decade, where she spent the majority of her time with the proprietary trading group. During her tenure, she advanced to become the Head of Credit, Derivatives and OTC Trading for Goldman Sachs Principal Strategies. She was also a Portfolio Manager at JP Morgan's hedge fund Highbridge Capital Management.

Nancy has been the recipient of numerous industry recognitions. Barron's named her to their inaugural list of the "100 Most Influential Women in U.S. Finance." Institutional Investor called her a "Rising Star of Hedge Funds." The Hedge Fund Journal tapped her as one of "Tomorrow's Titans."

Nancy writes and speaks frequently about markets and investing. She has been profiled by Forbes, and interviewed by Barron's, The Economist, The Wall Street Journal, and The Financial Times, among others. Nancy is also a frequent guest on financial television.

Glenn Christal, Chief Operating Officer, Quadratic Capital Management

Glenn Christal is responsible for overseeing the business and trading operations for the company. Previously, Glenn Christal was at Tudor Investment Corp, a multi–billion macro hedge fund, for fifteen years where he was the Treasurer and chair of the Treasury and Credit Committees. Mr. Christal oversaw collateral management, cash management, credit and trade documentation negotiations. His prior role was the Chief Operations Officer at Millennium Partners where he oversaw trade operations.

CK Chan, Senior Trader and Market Strategist, Quadratic Capital Management

CK's fixed income and volatility experience spans over 20 years as he headed market-making businesses for large banks such as Goldman Sachs, Morgan Stanley, and Citigroup. In those roles, CK provided liquidity and solutions for institutional clients such as asset managers, insurers, pensions, banks, and hedge funds.

CK serves as an Adjunct Professor of Fixed Income at New York University and holds B.S. degrees in Mathematics and Management Science from Massachusetts Institute of Technology and an M.S. in Financial Risk Engineering from New York University.

Quadratic Capital and Krane Funds Leadership

Jonathan Krane, Chief Executive Officer, Krane Funds Advisors

Jonathan Krane is the founder and Chief Executive Officer of Krane Funds Advisors, the premier platform for developing and delivering differentiated, high-conviction investment strategies to global investors and KraneShares, an asset management firm delivering China-focused exchange traded funds to global investors.

Jonathan Shelon, Chief Operating Officer, Krane Funds Advisors

Jonathan is the Chief Operating Officer at KraneShares. Prior to KFA, he was the Chief Investment Officer of the Specialized Strategies Team at J.P. Morgan, overseeing $40 billion in AUM and a Portfolio Manager at Fidelity Investments where he was responsible for $150 billion in assets for over five million shareholders in Fidelity's target date strategies, the Freedom Funds.

David Adelman, Managing Director and General Counsel, Krane Funds Advisors

Ambassador (Ret.) David Adelman is a Managing Director and the General Counsel of KraneShares. He previously was a Managing Director at Goldman Sachs in Hong Kong and partner in two global law firms practicing law in New York, Washington, D.C., and Atlanta. David was the 15th United States Ambassador to Singapore, concluding his service in 2013.

Odette Gafner, Chief Compliance Officer, Krane Funds Advisors

Odette Gafner is Head of Compliance at KFA and joined the firm March in 2019 to oversee the compliance program for the Funds and to serve as the Chief Compliance Officer (CCO) to Krane Fund Advisors. Odette has over 12 years of experience implementing policies and establishing best practice across the asset management industry. Prior to joining the KraneShares team, Odette worked at BlackRock for 12 years.

Guide to Trading ETFs

ETF liquidity is determined by the asset class, not by the fund size

- Exchange-traded funds (ETFs) are a wrapper, and although an investor may hold a large percentage of an ETF, one must look at the percentage owned of the underlying asset class.

ETF investors are not impacted by other investors' trades in the same ETF

- The ETF structure is unique in that all investors transact independently on an exchange. Being a large or small owner in a fund does not mean you're more or less impacted by the actions of other investors. In a mutual fund, all investors are impacted by the trading activity of other holders in the fund.

An ETF closure does not create principal risk

- If a fund were to close, neither large nor small investors would have a principal risk. The fund would be liquidated by the portfolio manager, and the investors would receive back NAV of the fund, minus costs, at the time of liquidation.

Trading in and out and fund size

- Investors can trade in and out of a fund regardless of the fund's AUM. ETF liquidity providers (market makers) can easily transfer the liquidity of the underlying basket into ETF shares. Market makers also accept NAV based orders for larger tickets.

Understanding ETF Liquidity

An ETF is not a stock

- If an ETF does not trade a certain number of shares per day, is the fund illiquid? No. It's a plausible assumption from a single-stock perspective, but with ETFs, there is more to consider. The key is to understand the difference between the primary and secondary market liquidity of an ETF.

Primary Market vs. Secondary Market

- Most noninstitutional investors transact in the secondary market—which means investors are trading the ETF shares that currently exist. Secondary liquidity is the "on screen" liquidity you see from your brokerage (e.g., volume and spreads), and it's determined primarily by the volume of ETF shares traded.
- However, one of the key features of ETFs is that the supply of shares is flexible—shares can be "created" or "redeemed" to offset changes in demand. Primary liquidity is concerned with how efficient it is to create or redeem shares. Liquidity in one market is not indicative of liquidity in the other market.
- The determinants of primary market liquidity are different than the determinants of secondary market liquidity. In the secondary market, liquidity is primarily a function of the value of the ETF shares traded and frequency and volume of the trading of those shares throughout the trading day. When placing a large trade—on the scale of tens of thousands of shares—investors are sometimes able to circumvent an illiquid secondary market by using an "authorized participant" (AP) to reach through to the primary market to "create" new ETF shares at NAV price.

Flow Chart of Creation Redemption Process for ETFs

- Small trades in ETFs flow normally are done in the secondary market, where all market participants can trade. It behaves like a stock, and everyone can buy (sell) from the best seller (buyer)
- Large and institutional trades – which normally would be a high percentage of the daily volume – are done in the primary market. The trading desk of the major broker dealers are called Authorized Participants and can create and redeem shares directly with the fund.
- BNDD Unit size for the primary market is 5,000 shares

The Quadratic Deflation ETF

Key Fund Information

Ticker	BNDD
Fund Name	Quadratic Deflation ETF
Primary Exchange	NYSE
Total Annual Fund Operating Expense	1.02%
Inception Date	9/20/21
Distribution Frequency	Monthly

Important Notes

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting www.kfafunds.com. Read the prospectus carefully before investing.

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated investment objectives. The Fund does not seek to mitigate credit risk, non-curve interest rate risk, or other factors influencing the price of U.S. government bonds, which factors may have a greater impact on the bonds' returns than the U.S. interest rate curve or deflation. There is no guarantee that the Fund's investments will eliminate or mitigate curve risk, or deflation risk on long positions in U.S. government bonds. In addition, when the forward U.S. interest rate curve steepens, the Fund's investments will generally underperform a portfolio comprised solely of the U.S. government bonds. In a steepening curve environment (increase in the spread between shorter and longer term interest rates), the Fund's strategy could result in disproportionately larger losses in the Fund's options as compared to gains or losses in the U.S. government bond positions. The Fund's exposure to options subjects the Fund to greater volatility than investments in traditional securities and may magnify the Funds' gains or losses. The Fund is non-diversified and therefore has concentration risk.

ETF shares are not redeemable with the issuing fund other than in large Creation Unit aggregations. Shares of any ETF are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. The returns shown do not represent the returns you would receive if you traded shares at other times. Brokerage commissions will reduce returns. Market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share.

There is no guarantee by the Fund will declare distributions in the future or that, if declared, such distributions will remain at current levels or increase over time. The Fund is non-diversified. The Funds may invest in derivatives, which are often more volatile than other investments and may magnify the Funds' gains or losses.

There are risks involved with investing in options including total loss of principal. Options investing is not suitable for all investors. This fund utilizes sophisticated options strategies which may not be suitable for all investors. For a more comprehensive discussion of the risks involved in options investing, please review Characterizations and Risks of Standardized Options available at http://www.theocc.com/about/publications/character-risks.jsp or contact the Options Clearing Corporation directly at 1 N. Wacker Dr., Suite 500, Chicago, IL 60606. (1-888-678- 4667)
